Odoo System

The Odoo System is a great ERP platform but it lacks a lot of options that we need in Germany. We developed many plugins to improve the compatibility with the German business style. And most of the plugin's work with Odoo 11 and Odoo 15. And we are working to improve them on both versions.

Sales System

- The sales system, built on Odoo 11, is an integrated sales system that allows you to create Quotation, invoices, and Delivery note with the security of managing the warehouse and products in an easy and organized way with many features and additions that facilitate business management
- We have designed additions to the system to give the user the ability to control the system as he wishes, taking into account the German accounting system.
- Thanks to simple interfaces, the user can view invoices and know their status (paid - open - unconfirmed...) through one interface.
- We have designed several additions to provide the following functions:

- 1- Designing several Templates of the invoice to suit the customer's identity and adding additional elements to the invoice with the ability to completely control what is printed on it.

Point-of-Sale System

The Session interface in Odoo is very good and easy to use but the number of functions that the user want will definitely ruin the Interface, so we developed many interfaces that will play along the main interface and make everything easy to use.

Odoo 11

Odoo 15

We developed plugin's that will help the user to create (daily – Monthly – date range) reports.

You can create different types of reports grouped by (Taxes – Products – Days...)

Users can create or/and edit all the products within the session.

Produktname	Listenpreis	Tax	Edit	Print	Select

Odoo 15

Mobile App

This Development carried out to the Point-of-Sale function in Odoo. So, we developed a lot of plugins to the Odoo to help our customers. Then we developed a tablet app to make the Odoo POS more portable. The app can cache the products in the main session to reduce the load time.

APP CONNECTION MAP

APP DESCRIPTION

This app can be fully customized, the user can change the language, Numbers system, Quantity handling, Print Options, the number of products in one page and a lot more.

Total without tax:		421.09 €
Total tax:		80.14 €
Total:		501.23 €

There are many grouping options for the reports.

The app can print using a wide variety of printers like Sunmi Cloud Printer, Network Printers, Bluetooth Printers, USB Thermal Printers.

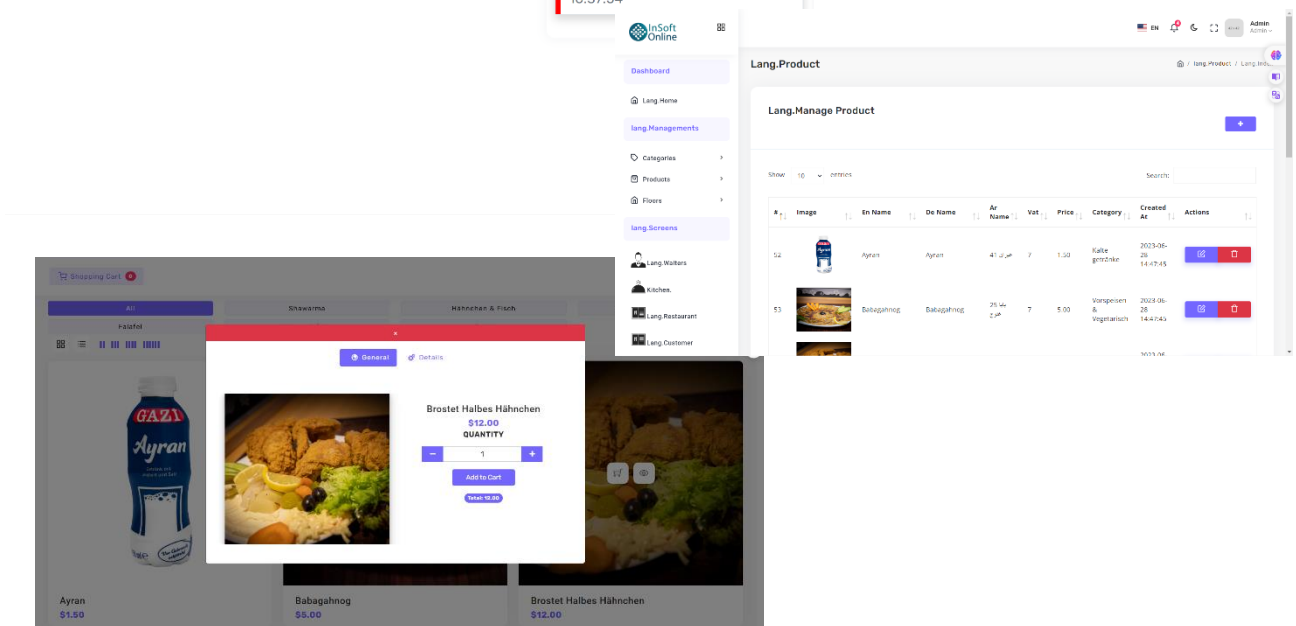

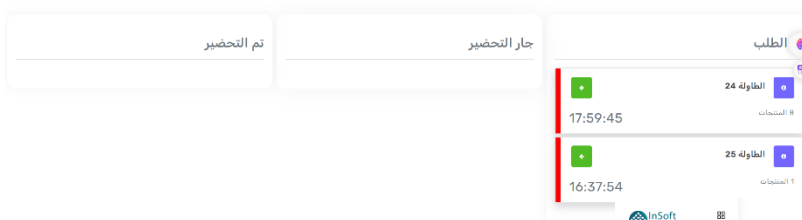

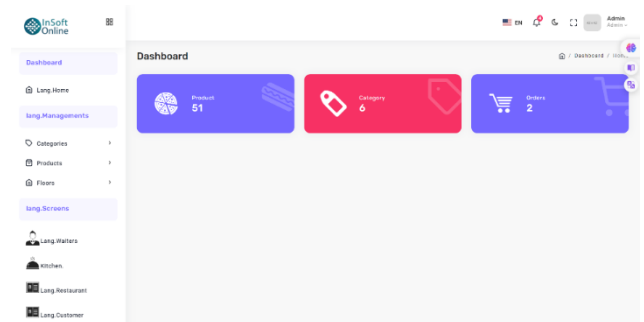

Restaurant System

TECHNOLOGY: LARAVEL, FLUTTER

A restaurant management application that helps organize orders, receive them from tables, and record customer orders through a dedicated application used by food waiters. It is fully connected to the ODoo ERP system to record invoices and create the necessary reports.

APP FEATURES

- Organize Table
- Register Order from Mobile App
- Call Waiters from Kitchen
- Organize Order in Large Screen
- Tracking Status of Orders
- Integration With Odoo ERP System
- Manage Product and Category

This System Connect to Odoo POS system to show the cashier the orders that the waiters create. The order when arrives the kitchen screen rings, and the POS session show a notification.

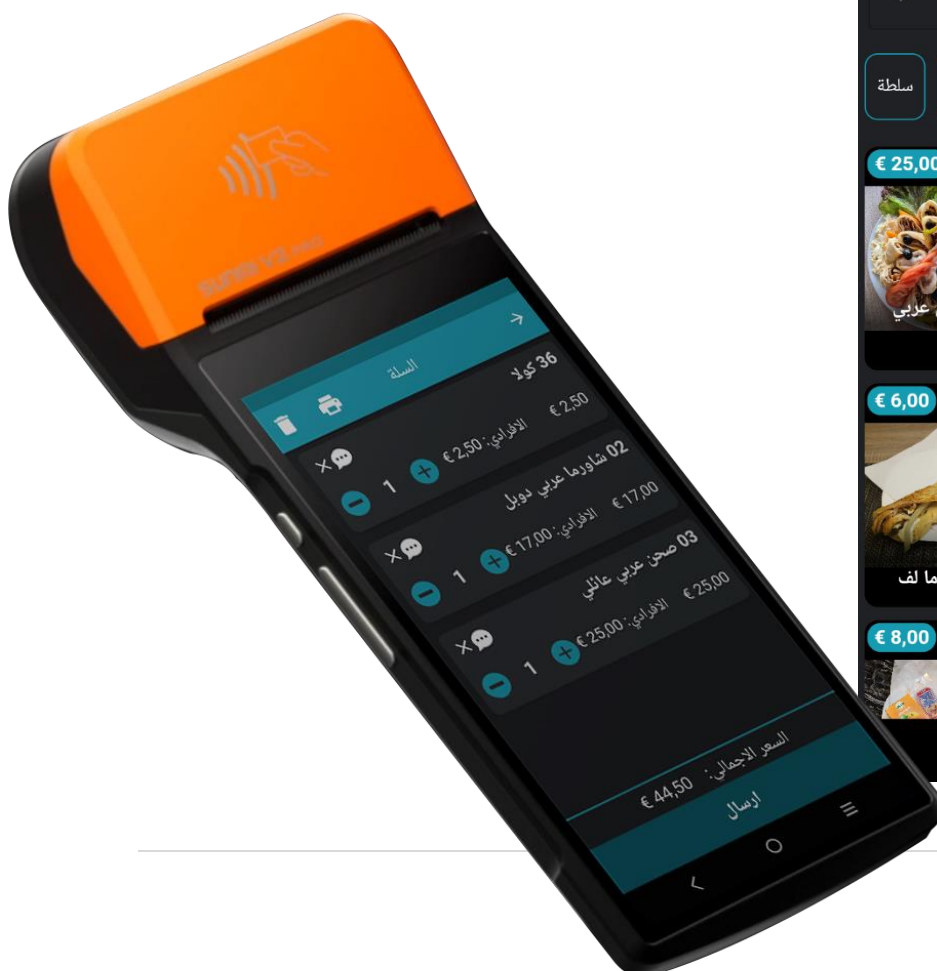

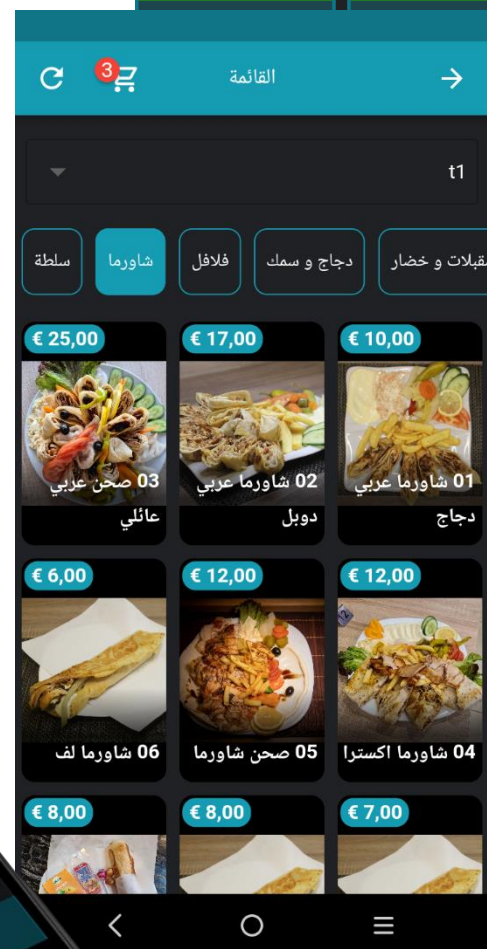

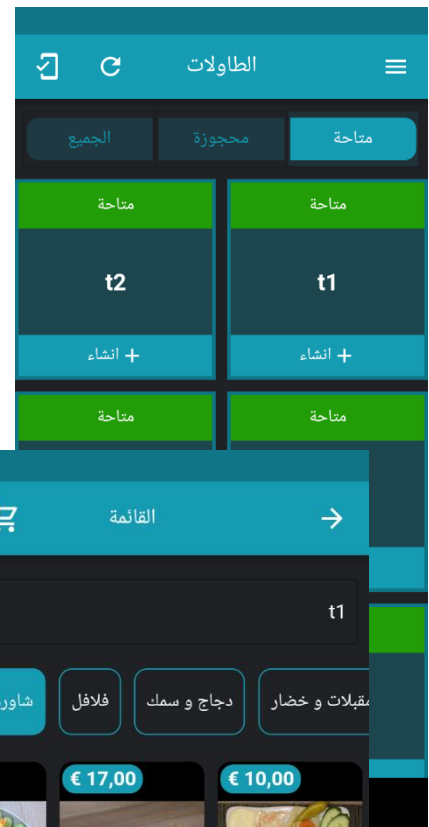

The Waiter App:

The app available in three languages and the main screen is a list of the tables that will auto update according to the status of the table.

The chef in the kitchen can press the bell icon on the screen to send a notification to the waiter that contain a message that tell the waiter to come to the kitchen window.

When the table pressed the menu of the restaurant shows on the screen and the waiter can choose what the customers want and add them to the cart and send it to the kitchen and the Odoo POS system.

The waiter can print the order list directly form the device.

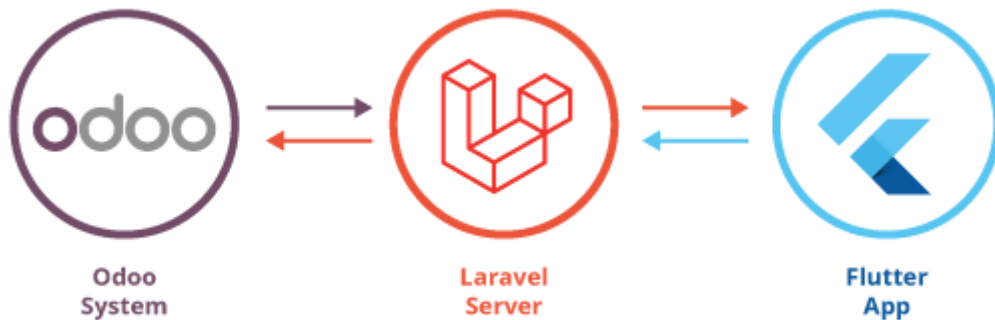

LOGSTIC

TECHNOLOGY: LARAVEL, FLUTTER

This system helps automate logistical operations and track orders from warehouses and deliver them to customers, as these orders are synchronized from the ODOO system. This system provides a comprehensive view of shipping and distribution operations, and helps improve the efficiency of inventory management and reduce production and delivery costs. It also allows companies to improve customer service by providing accurate and reliable information about the status of orders and deliveries.

Mobile App Features:

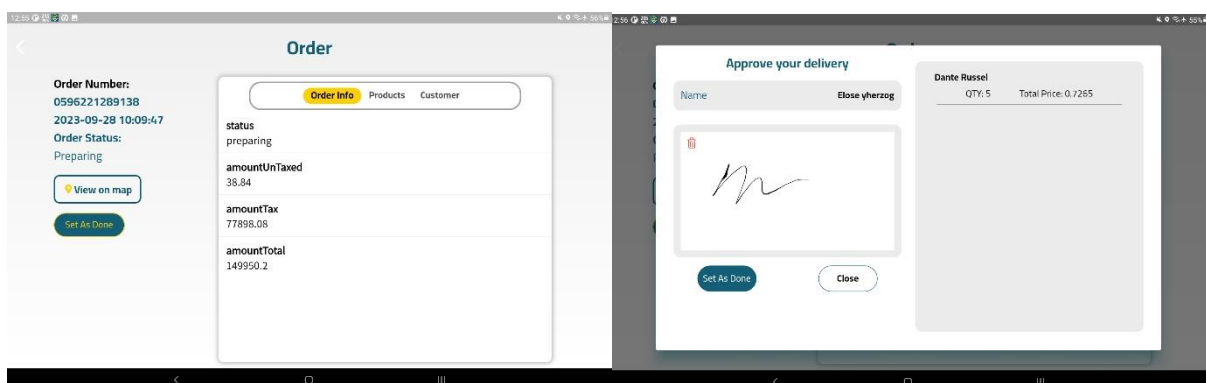

- The app connected to the server and can get the ready orders for the day and order them base on the distance between the driver and the shipping location.

- You can show all the customers from the Odoo system and you can open the customer info with all the orders that the customer requested filtered by status

- When delivering, the customer can sign the delivery notice to prove that the customer got their order.

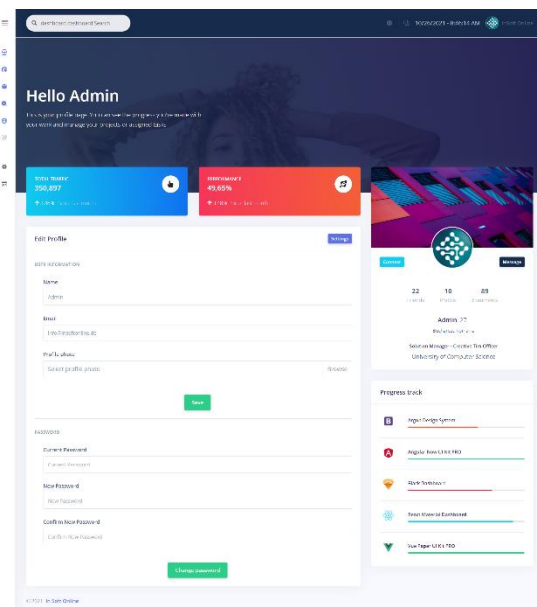

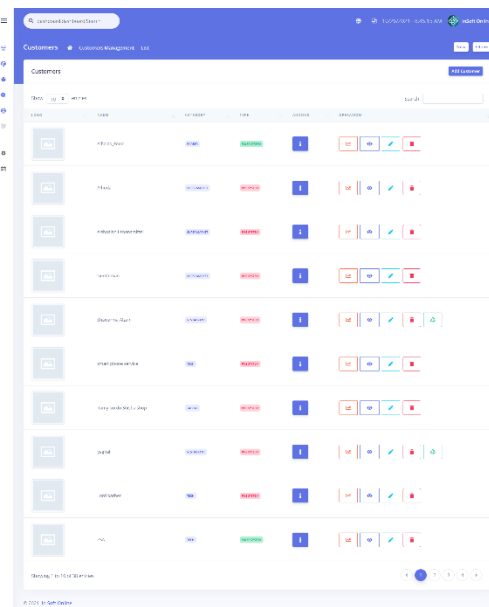

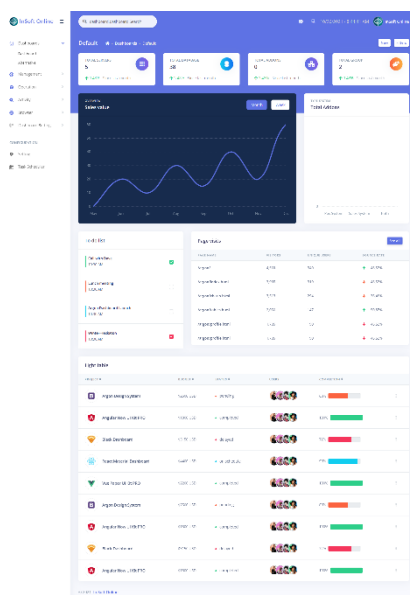

IT Support

TECHNOLOGY: LARAVEL

The project's goal is to facilitate the management of the company's resources by controlling customers, servers, their subscriptions, and automatically sending monthly and annual invoices and payments.

APP FEATURES

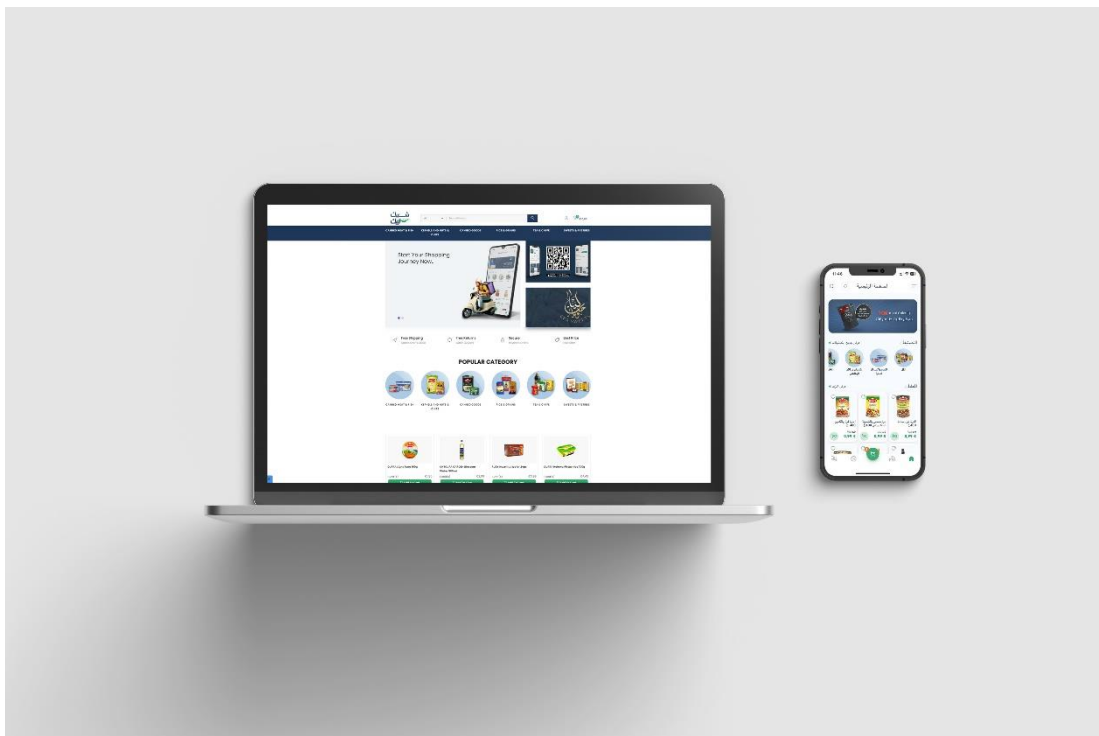

- Manage Customers
- Manage Servers
- Manage Subscription
- Manage Invoice
- Automation Send Invoice
- Easily Access Customer Information
- Complete Connect with Odoo Erp System
- REST Api Which Connects Mobile Application for Support Purpose

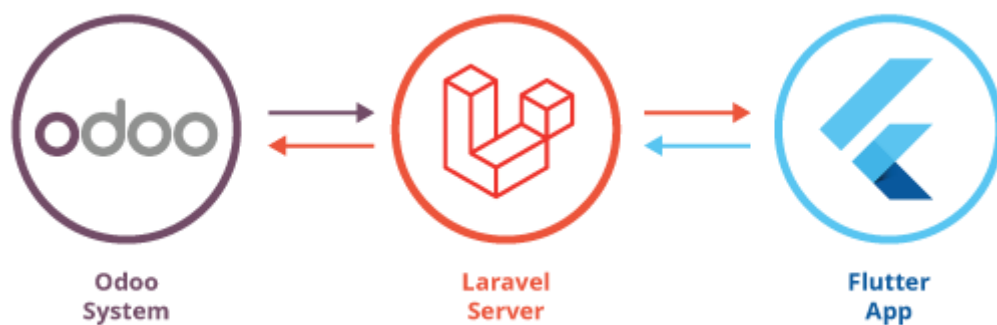

Shobek Lobek

TECHNOLOGY: LARAVEL, REST-API, FLUTTER

An online store that serves the delivery of products in Germany as quickly as possible through an automated system, starting from the ordering stage up to the customer's delivery, as it goes through the warehouse stage for verification and processing

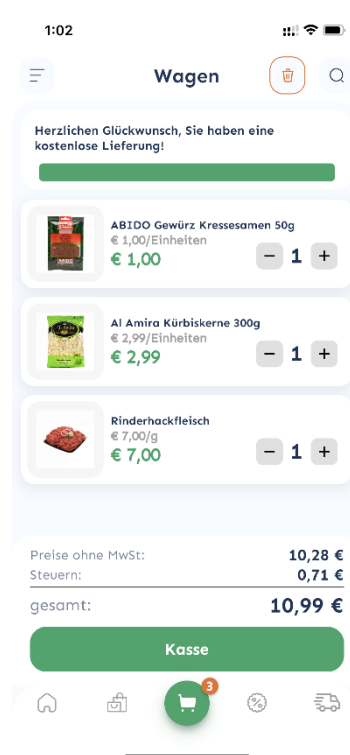

APP CONNECTION MAP

The system contains unique advantages in addition to the main advantages of online stores, including

APP FEATURES

- Getting the Products from the Odoo
- Registering orders on the Odoo system
- Managing delivery times in a distinctive way that ensures the delivery process with the shortest time
- The system contains sub-applications that include the kitchen, sweets, and warehouse, where each role of people has its own application

- The app can be customized from the dashboard, the customization contain: the Slider Images, Main Categories in the Home Page, the Offers, and the zip codes of the delivery areas.
- Users can change the language of the app and the Theme mode of the app.
- The cart can calculate the total and show the customers if they got the shipping offer that the admins set in the dashboard.

Makkani

TECHNOLOGY: LARAVEL, FLUTTER, Firebase

The purpose of the application: Facilitate the communication process between Arab service providers and customers through the instant chat feature available within the application.

Advantages Of the App

Speed in finding a service or place

If you want to search for what you want from services or places, the search process is very easy and fast.

Free

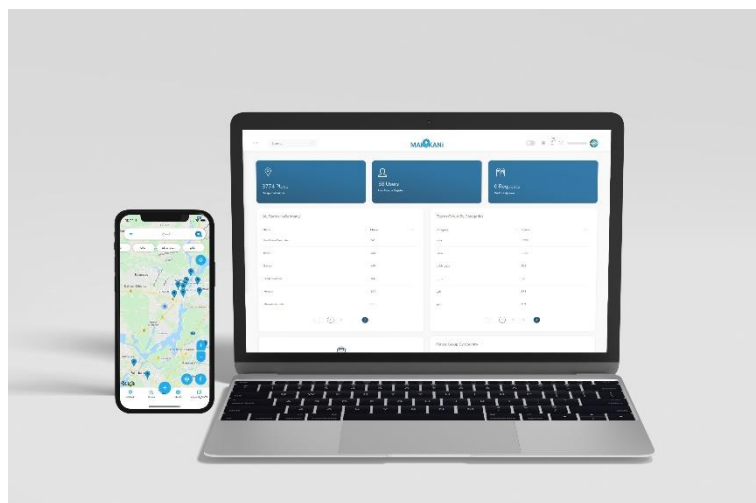

If you want to use the search service in MAKKANI, don't worry! It is completely free.

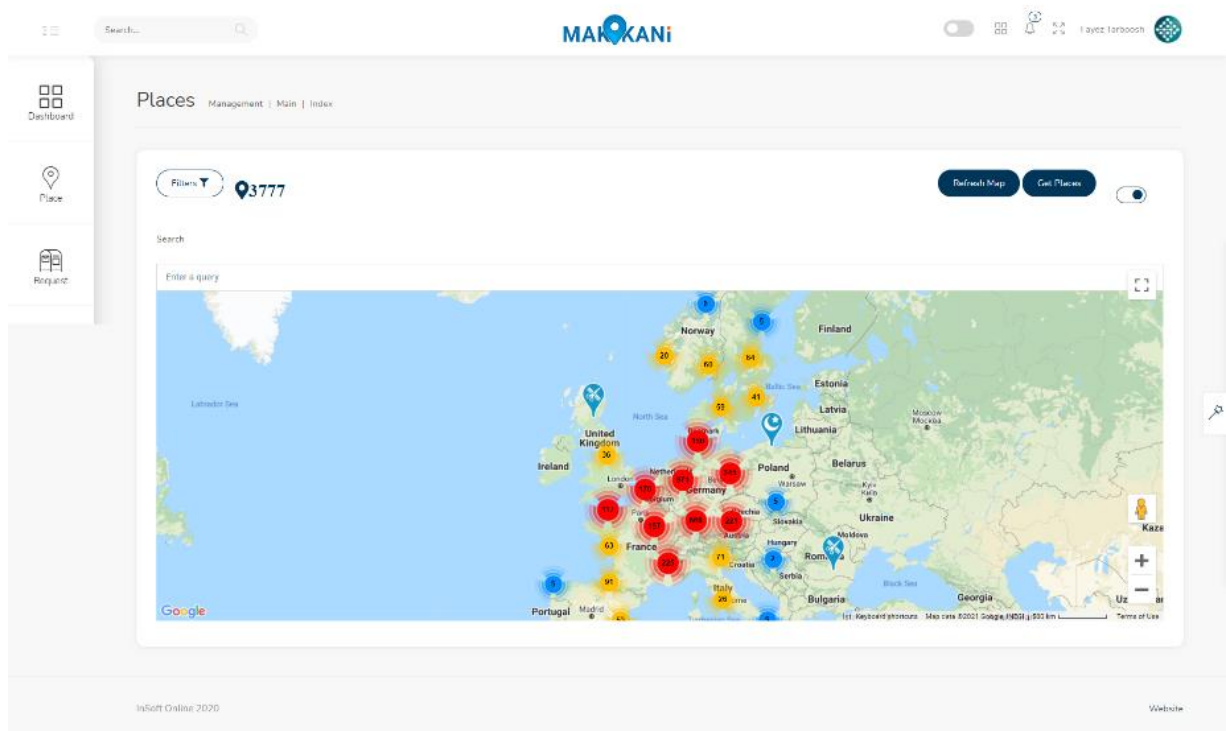

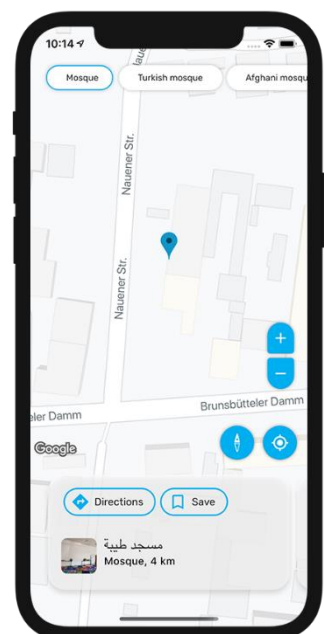

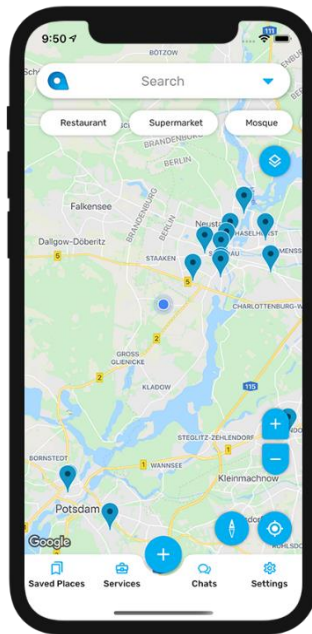

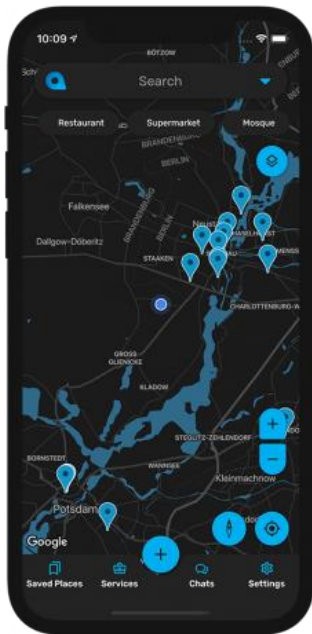

Speed in adding a new place

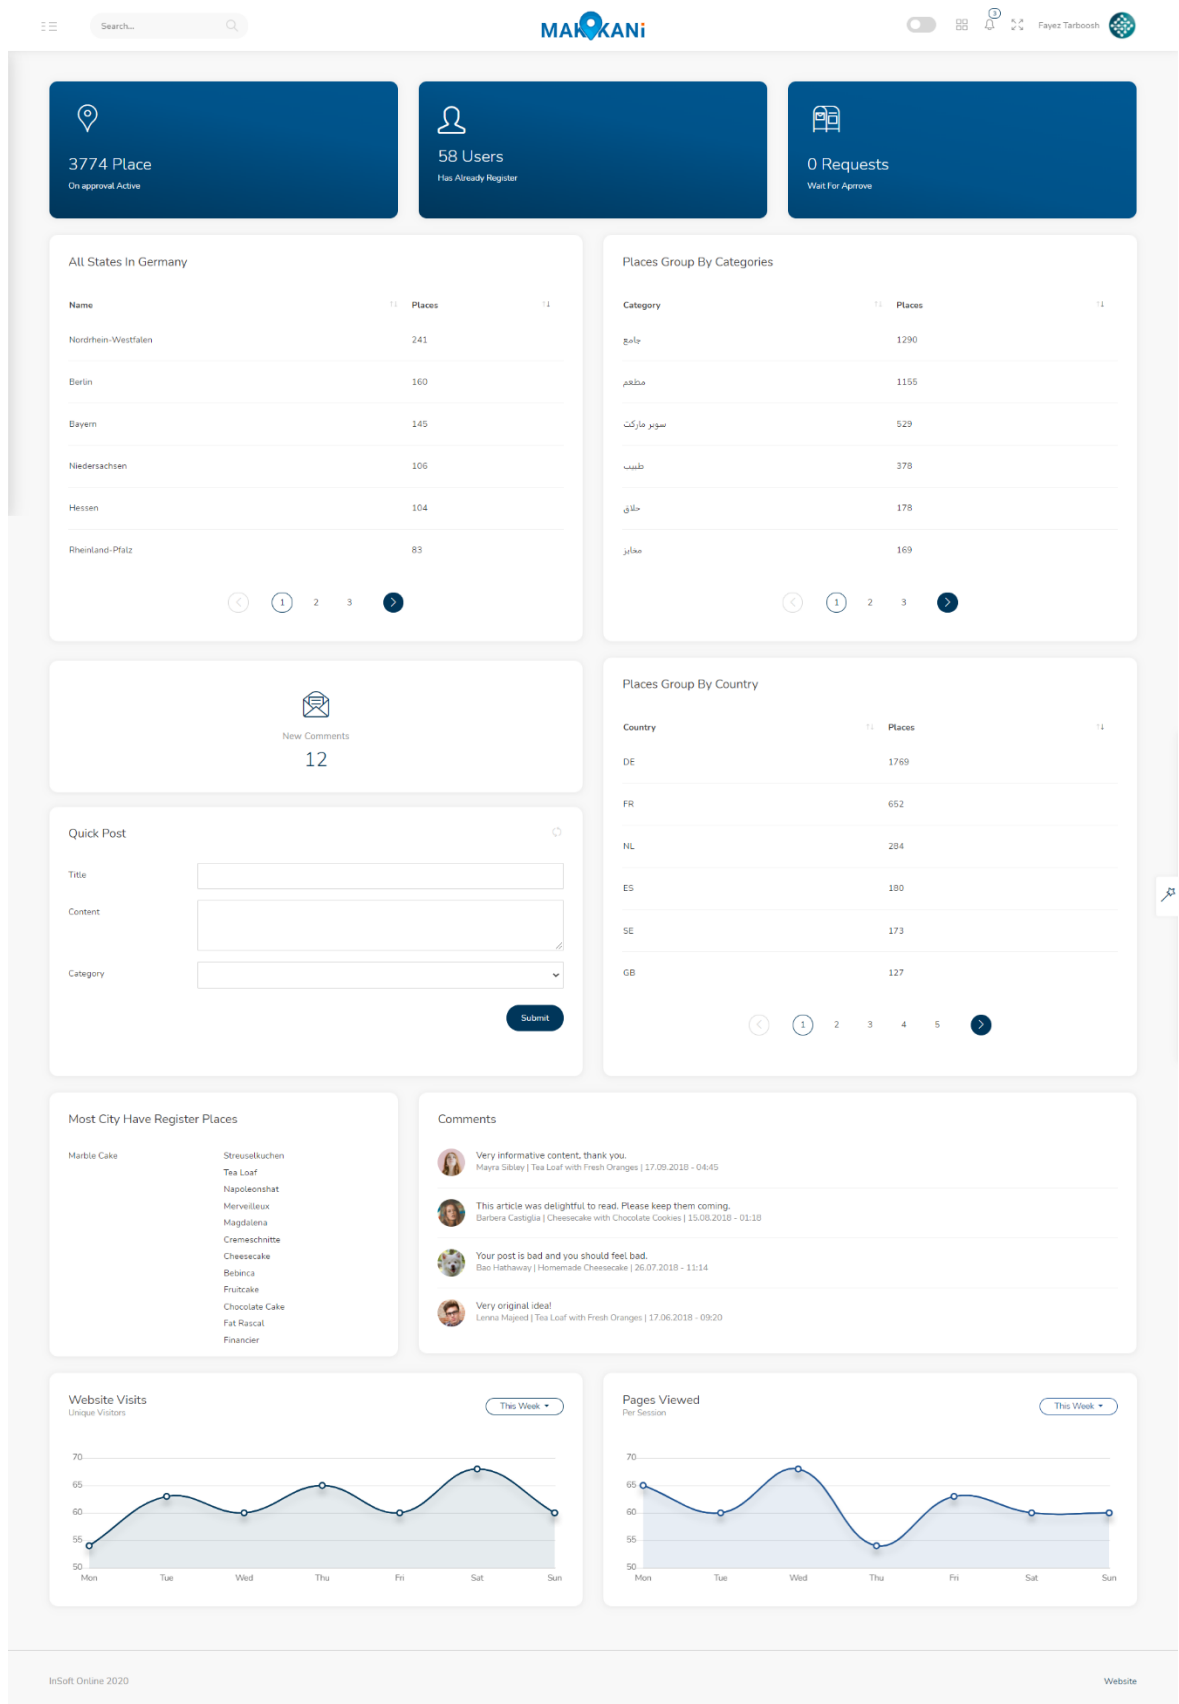

If you are a business owner or want to provide a service and want to add a new place on the map, you can add it easily.

APP FEATURES

- custom search
- multi language
- Compatible with all platforms
- Free
- Customizable
- Instant conversations
- High security

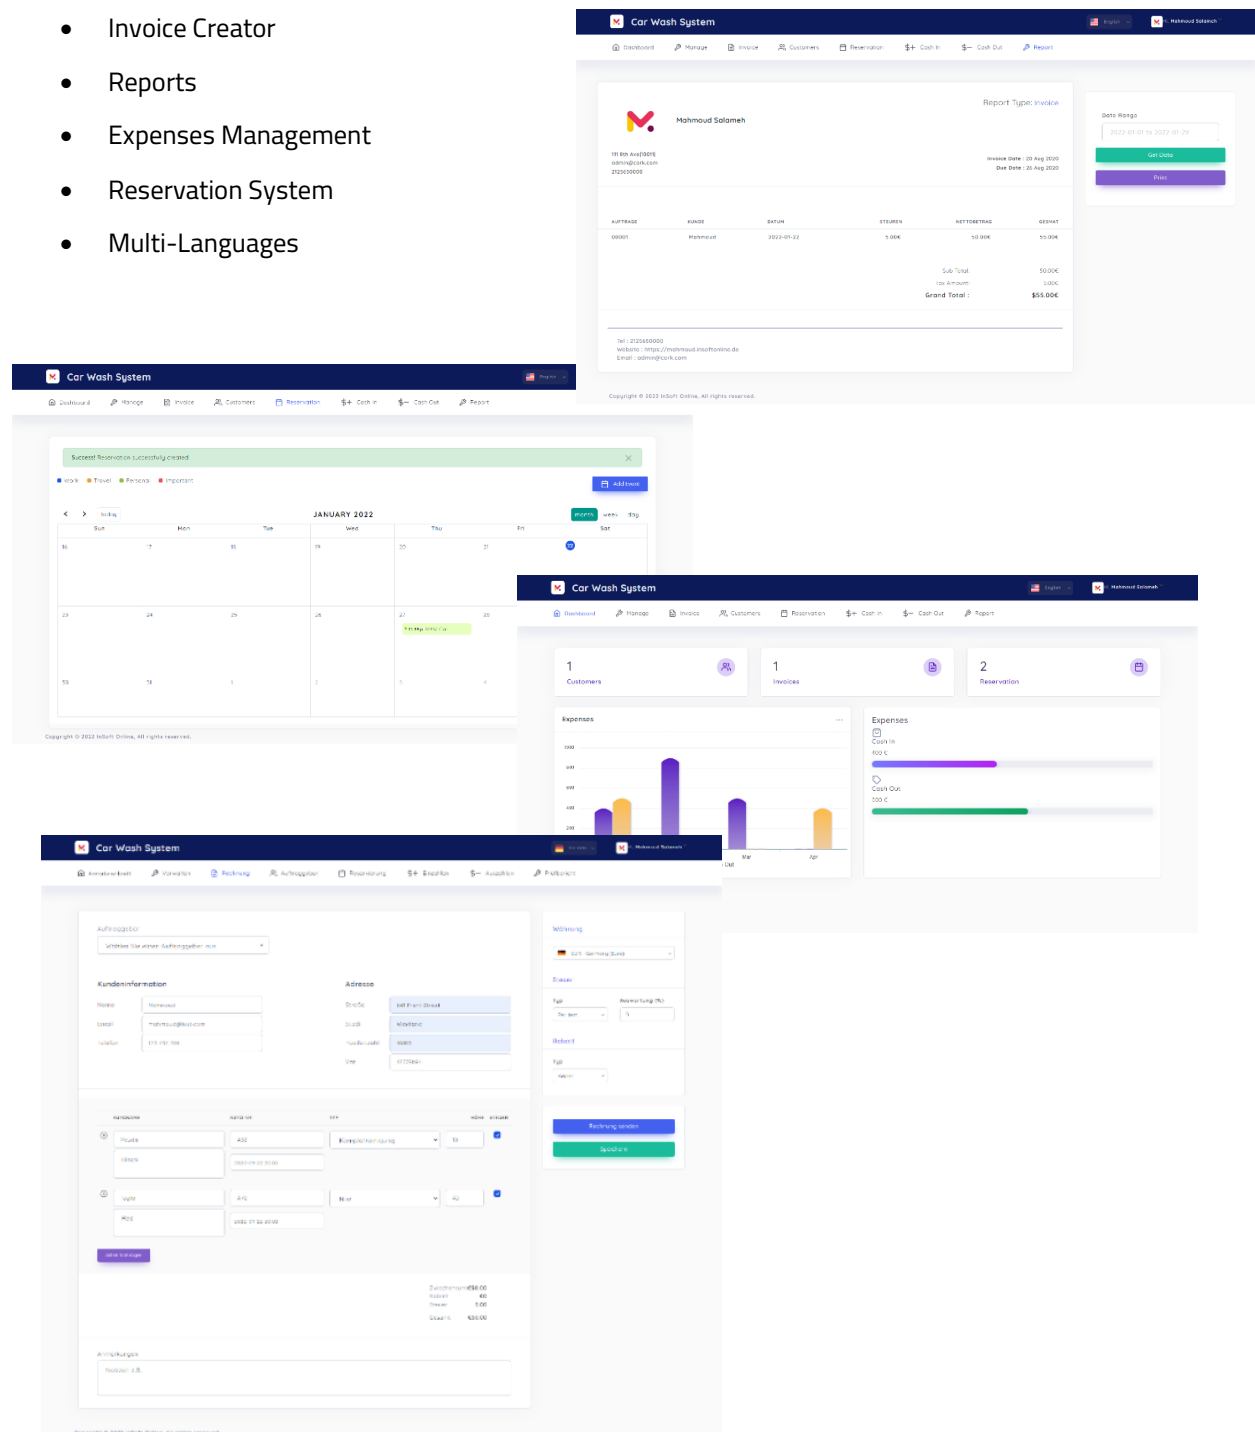

Car Wash Management System

TECHNOLOGY: LARAVEL, JQUERY, BOOTSTRAP

APP FEATURES

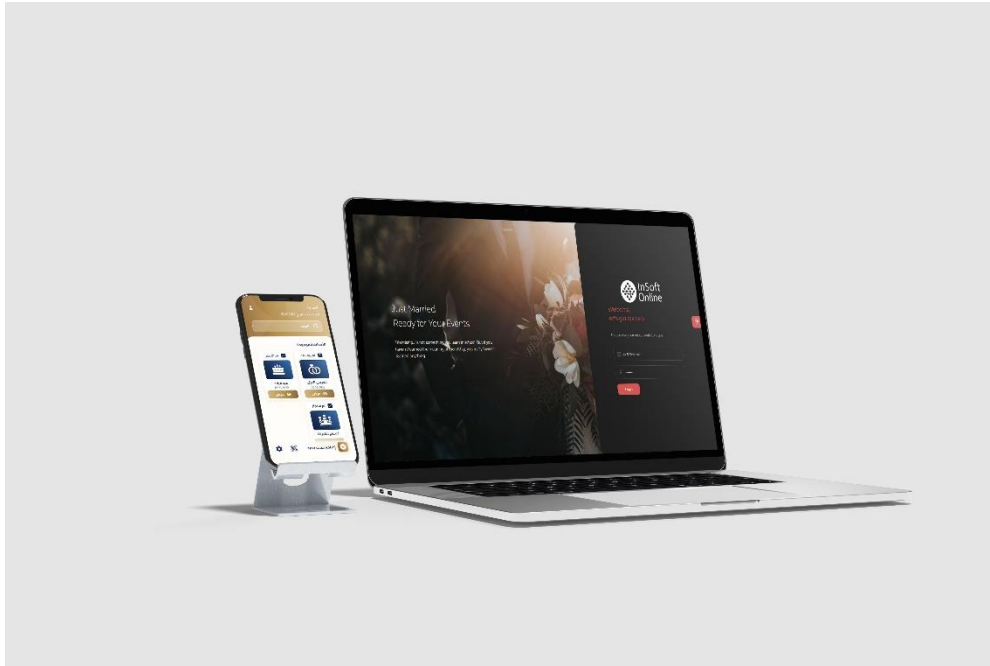

- Invoice Creator
- Reports
- Expenses Management
- Reservation System
- Multi-Languages

Event Creator

TECHNOLOGY: LARAVEL, REST-API, FLUTTER

This application helps lounge owners and others to create and organize various meetings and events, send invitations to the concerned people via WhatsApp, and get rid of the traditional invitation cards

APP FEATURES

- Auto send invitation through WHATSAPP
- Select from big collection of pre-prepared template which suitable for your event
- Mobile application has scanner to scan QR of invitation and check status
- Simple & clean dashboard
- Light & dark mode
- Support multi languages

The screenshot displays the 'Party Planner' app interface. The app has a dark theme and a sidebar with icons for Home, Party, and a Profile/Settings icon. The main content area shows four event cards: Meeting, Married Event, Birthday, and Birthday Event. Each card displays a date, time, location, and a list of guests. The cards are decorated with a floral pattern and a red ribbon. The bottom of the screen shows a 'Guests Invited' section with a list of names and a 'Send Invite' button.
